## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see page 6, filed 12/7/2006, with respect to specification have been fully considered and are persuasive. The objection of the specification has been withdrawn.
2. Applicant's arguments with respect to claims 14-20 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
  2. Ascertaining the differences between the prior art and the claims at issue.
  3. Resolving the level of ordinary skill in the pertinent art.
  4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
5. Claims 14-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bonutti ('325) in view of Banik *et al.* ('149).

6. Bonutti teaches a method of using an arthroscopic surgery device consisting of making an arthroscopic penetration, moving a cylindrical sleeve distally relative to a tubular body to expand arms from a first position to a second, deploying an instrument to perform a procedure and returning the arms from the second position to a first position. (See Claim 7) The step of penetration includes either using the device to penetrate the body or inserting the device through an incision. (See Column 1 Line 30-35) Said incision made by a trocar positioned within the device. (See Column 2 Line 45-50) The step of moving further includes a applying a force to the proximal end of the device. (See Claim 8)

7. Bonutti fails to teach or disclose a liquid prevention means to prevent liquid from leaking out of the cannula.

8. Banik *et al.* teaches a transparent cannula comprising a flapper valve (100) that creates an air tight seal preventing gas from escaping from the cannula. (See Figure 2 and Column 7 Lines 7-17)

9. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the disclosed method of Bonutti with the cannula teachings of Banik *et al.* to provide method of arthroscopic surgery with a cannula with liquid prevention means.

***Conclusion***

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

11. A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
